-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7-9, 12-19, 22, 26-27 and 43-44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Haessig in view of Official Notice. Haessig discloses the invention substantially as claimed. Haessig discloses a ventilation flow control unit having a flow controller 69, 63,63A mounted on a plenum, a flow sensor 80 and a thermal coil 55 fixed in the plenum. Official Notice is taken that electrical disconnects such a plug and sockets, switches or wire terminals, voltage transformers for reducing supply voltage, automatic control valves on cooling coils to control cooling, and mounting brackets to support control valves are conventional in the air conditioning art. Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the system of Haessig such that it included the use of same.

Claims 1-2, 4-6, 28, 30-42 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Haessig in view of Official Notice as applied to claim 7 above, and further in view of Noboru. Noboru teaches the use of an isolation valve 7 on the inlet of a ventilation system as well as control valves on the exhaust and return lines. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the system of Haessig such that it included the use of an isolation

valve on the inlet of the ventilation system as well as control valves on the exhaust and return lines in view of the teachings of Noboru.

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
